

DID YOU KNOW?

DID YOU KNOW THAT YOU COULD BE USING NON-COMPLIANT LINTELS THAT DON'T MEET AUSTRALIAN STANDARDS*?

Every lintel installed in Australia must contain certain markings for clear identification post-install.

All Galintel® steel lintels meet this requirement. For added peace of mind our products are made with high quality steel and backed by a 25 year warranty[^].

BUILT

Galintel Solid Base Angle, T-Bar and Rendabar® are manufactured locally at our facility in Coffs Harbour, NSW.

STAMPED

Galintel steel lintels are permanently marked with our brand, Australian Standard number and durability classification on the face for visibility after install as required by AS2699.3:2020.

LABELLED

All Galintel steel lintels are clearly labelled to identify the Australian Standard, durability classification, manufacturer and any limitations as per AS2699.3:2020.

TESTED

Galintel steel lintels are hot-dip galvanised and tested ensuring the coating thickness exceeds 85 microns to meet the 'R3' durability classification of AS2699.3:2020.
